

Table 1: Possible answers to each question from the interview for each of the groups

Both conditions ( <i>'with time limit'</i> , <i>'without time limit'</i> )	Question 1	1	In the high level of explanation, the explanation was the best for me because it was the most detailed and understandable.
		2	In the medium level of explanation, the explanation was the best for me because the explanation in it was just the right amount, not too much like the high level and not missing like the low level.
		3	In the low level of explanation, the explanation was the best for me because I prefer to receive a general explanation and then trust my abilities without having to use explanations from the robot.
		4	I felt that the explanation in both high and medium levels of explanation was equally good for me and better than the low level.
	Question 2	1	At the high level, I felt the most comfortable and confident operating the robot, at the medium level, I also felt relatively good but it was less understood, but at the low level, I really felt that I did not understand the robot's explanations and I didn't know what to do, so I wanted to rely more on myself and I used only the camera and I ignored the instructions that only confused me.
		2	At the medium level, I felt the most comfortable and confident operating the robot, at the high level, I also felt relatively good but it was too detailed and I don't think it's necessary, but at the low level I really felt that I did not understand the robot's explanations and I didn't know what to do, so I wanted to rely more on myself and I used only the camera and I ignored the explanations that only confused me.
		3	I prefer to trust myself more than explanations from the robot, so I liked the low level of explanation the most compared to the others even though they are detailed and better in terms of explanation.
		4	I felt good and comfortable operating the robot both at the high and medium levels of explanation. I think the explanations at both levels are equally good and better than the low level that was not clear, made me confused and I didn't know what to do so I had to perform the task without relying on the robot.
<i>'With time limit'</i> condition	Question 3	1	I would choose the high level of explanation if there was no time limit for the task - without a time limit I would prefer to get the most detailed explanations I can get.
		2	I would choose the medium level of explanation if there was no time limit for the task - I think it is clear enough and there is no point in getting overly detailed explanations.
		3	I would choose the low level of explanation if there was no time limit - I like to trust myself more than explanations from the robot and if I'm not pressed for time I'd prefer a very general explanation and then operate alone.
		4	I would choose the high or medium levels of explanation if there was no time limit - I think these two levels might be equally suitable.
<i>'Without time limit'</i> condition	Question 3	1	I would choose the high level of explanation even if there was a time limit for the task - when I'm under pressure I prefer to receive an exact, clear and detailed explanation so that I can carry out the instructions without thinking too much. It takes the load off and doesn't add pressure like not detailed explanations and will allow me to do the task better.
		2	I would prefer the medium level of explanation in a time limit situation because I want to be on time and the high level is too detailed and may hold me back and in contrast, the low level is not detailed at all and this can only cause me stress and confusion in such a situation.
		3	I would prefer the low level of explanation because in a time limit situation I prefer to be in full control of the situation and not be helped by explanations from the robot. When I'm under pressure I prefer to rely only on myself.
		4	I would choose the high or medium levels of explanation if there was a time limit - I think these two levels might be equally suitable.
